

Weekly Update on Markets

by

Eleazer Amevor-Agbo

This report provides an overview of the Ghana Stock Exchange (GSE) performance between March 27th and April 4th, 2025. The analysis focuses on four key variables: the GSE Composite Index (GSE-CI), trading volume, market capitalization, and the Financial Stock Index. Given the limited five-day timeframe, I have refrained from drawing conclusions or making predictions, as this period is insufficient to establish meaningful trends.

Ghana Stock Exchange Composite Index (GSE-CI)
